

README

Implementation Contributions:

Boris Chu: 34%

- Spotify API Login Implementation
- Spotify Music Player Implementation
- HealthKit Implementation

Chris Pulicken: 33%

- Graphics Design
- UI Layout and Color Scheme
- UI Constraints

Eucharist Kun: 33%

- UI Constraints
- Graphics Design
- Timer Implementation

Grading Level:

Same grade for all members.

Differences:

The only minor difference is because we do not have a iPhone with a M7 motion processor (iPhone 5S and above), we could not test the step count and health rate functions. One can manually enter step count and heart rate to see the data in the Health Data page. The charts are not implemented yet but will be for the presentation and the final release because CoreMotion, Step count will be needed for determining song choice.

Special Instructions:

Run RunningRhythm.xcworkspace file in Xcode to run the app. Cocoapods were not used this release but will be for the final release. For health data, you need to enter step count and heart rate manually to see health data reflected from HealthKit in the health data page.
